1. A. Mested was
     I deleasi package + ada + package nested lap
     2 Unport library -> tolat ada
     3. bagian class -> ada -> public class no z
     4. polymentation section -> tidat ada
   & Array Munggunakan woping
     1. Detlanci pactage -> Holat ada
      2 Impor history -7 didak ado
      3- bagian class -rada -> Public Class array ,
      4. Dolumentation Section - a oda -> Panel rang array,
       5. Muthod -7 main -7 add -> public static void main
2. Nested 1008
   package restalloop
     public class Non
         public static wid main Estring arg
           Int x, 4:
           For ($0 : x 4 = 4 : x++ ){
              for (y=0; ycx; y+1){
                      System out, print (+)
      system , out . print ("")
                                                 output
 Penjelasan
  X = 0; x L = 9? true -> langut bopping dalam
  7:0; 060 ? False -> stop looping dolan pith
                                                         enter become
 X++; X = O+1 =1; X = 06 = 4? true > conjut looping dalam
  7.0; OCI ? true -> print
  -/++; Y=0+1=1; 101 ? talse > stoop looping balan
   print
```
